

Introduction to Strategic Sustainable Development

prepare your organization for the future

BTH's education for sustainable development was recently acclaimed in a 2009 ranking completed by the EESD Observatory.

Come join our award-winning courses on sustainability!

At a Glance:

- Small class sizes
- Two week course duration
- Flexible delivery locations

Course Overview:

The results of unsustainable human development are evident worldwide - climate change, species extinction, pollution, poverty, and inequality are deteriorating our capacity to sustain our ways of life. Our society needs more effective ways of using our skills and resources to create positive change.

The purpose of this course is to consider these sustainability challenges using a whole-systems view, and suggests that a transdisciplinary approach is needed to deal with the sustainability challenge of meeting our society's needs today and into the future. The course is delivered in a non-traditional educational setting with experiential and holistic learning methods, to enable hands-on learning.

If you are interested to help take action towards sustainability with your organization, this course is for you!

Specific learning objectives:

By the end of the course, the learner will be able to:

- Understand the relevance and power of whole-systems thinking related to our current sustainability challenges;
- Understand and apply a framework for strategic sustainable development (FSSD), a method for planning and decision-making;
- Create a full sustainability analysis and a compelling business case for the learner's organization; and
- Share ideas and discuss common aspects related to leadership for sustainability.

"The question of reaching sustainability is not about if we will have enough energy, enough food, or enough other tangible resources - those we have. The question is: will there be enough leaders in time?"
- Dr. Göran Broman and Dr. Karl-Henrik Robèrt
