

Eduroam for iPhone

This manual is written for a Swedish version of iPhone3GS but is also tested for iPhone 4.

1. Start by choosing "Settings -> Wifi"
2. Choose "Other..."
3. Write **eduroam** at "Network name".
4. Go to "Security" and choose **WPA2 Enterprise**
5. "User name" is your user id followed by `@ad.bth.se` or `@students.ad.bth.se`.
6. "Password" is your usual AD domain password. Then press "Connect"

Next you will be connected to BTH's radius servers and the first time you do this you must accept our SSL certificate. It will be sent from either *netsrv4*, *netserv5.bth.se* or *radius-ide.tek.bth.se*.

After this your phone will automatically connect to eduroam as soon as it finds the network.
