7. Short Biografi

Mats Pettersson has worked for more than 25 years in the field of radar systems research at BTH, FOI and at Chalmers. For all years his research has oriented to new radar signal processing algorithms for future radar surveillance and radar remote sensing systems. He has developed new Synthetic Aperture Radar (SAR) algorithms and he has done important work for monostatic, bistatic, multi-static radar and circular SAR systems. For these systems he has also achieved algorithms for detection and estimation of various type of targets but focusing on moving objects and change detection between images. Therefore, a combination of SAR processing and array signal processing has been an important part of the research. The developed algorithms do not only consider the common narrow band radar systems but are mainly developed for future UWB

band systems that give resolutions below the operating wavelength. He has also experience of modelling electromagnetic scattering, radio communication and in the latest years he has started research into the fields of Radio Occultation, automotive radar and optical images for traffic and transport. For Radio Occultation the focus has been algorithm development to handle Earth and Ionosphere reflections and in automotive radar it has been to handle the increasing problem of interference. The optical image analyses research has increased his interest in AI and machine learning algorithms that has also got a spin off into radar research.

8. Experience of industrial and international research collaboration

Mats has during the years at FOI and BTH been an active project leader. At moment, he is the project leader of two external projects. He has been the main project leader/applicant for totally 15 research projects with approximate *90 million SEK* in external funding. Almost all those projects have been in close collaboration with industry. Therefore, Mats has a long experience of national and international research collaboration. At this moment, the main national collaborators are RUAG Space, Saab, Safe Radar, Swedish Transport Administration, Swedish Transport Agency and FOI. Internationally he is collaborating with *ITA*, Brazil, *University of Duisburg*, Germany *Airbus Defence and Space*, Germany, *Alberta University*, Canada and “Forschungszentrum der Bundesrepublik Deutschland für Luft- und Raumfahrt” (*DLR*), Germany. In the past, his research groups has been collaborating with e.g. *NASA*, USA, *DERA*, UK, *Air Force Research Laboratory (AFRL)*, USA, *DARPA*, USA, *Office National d'Études et de Recherches Aérospatiales(ONERA)*, France, *ESA*, European
